

JAVA SDE-2 INTERVIEW PREPARATION SERIES

JAVA ENGINEERING - BOOK 02 OF 09 - STUDY STEP 19A

Git and GitHub for Java Engineers

Version Control, Collaboration, Reviews, and Interview-Ready Delivery

BY

Vinay Reddy Kalluri

A guided roadmap for Git fundamentals, safe collaboration, pull requests, conflict recovery, and professional Java delivery workflows.

GIT | GITHUB | BRANCHES | REVIEWS | RELEASES

JAVA 21 | INTERVIEW CORE | SDE-2 FOLLOW-UPS | PRINTABLE EDITION

Series edition - Release 2026-07-29

Open educational interview-preparation edition

Start Here - Your Route Through This Volume

60-second entry rule: If two or more recognition signals below expose a gap, begin with Chapter 1. If the prerequisites are weak, step back to **JAVA 01 – Java Problem-Solving Foundations**. If you can already explain every outcome without notes, jump to Part II and prove it through the practice ladder.

Define the complete learning path for the source-control skills expected from a Java SDE-2 engineer before the chapter set is expanded.

Readiness map

Decision	Evidence
START HERE	A change must be reviewed or safely reversed; Multiple engineers collaborate on one codebase; An interview asks about branching, conflicts, or delivery.
PREPARE FIRST	Java Foundations Book 01; A local Git installation.
MOVE ON WHEN	Understand the planned progression from local history to team collaboration; Know the practical and interview outcomes of the finished volume; Contribute content against explicit completion criteria.

Choose the route that fits today

- Learning:** read in order, type the representative Java examples, and complete each dry run.
- Revision or rehearsal:** start at the first decision map, invariant, or failure mode you cannot explain; if none expose a gap, go directly to Part II and prove readiness without notes.

Java Segment Position

JAVA 01 - Java Problem-Solving Foundations	YOU ARE HERE JAVA 02 - Git and GitHub	JAVA 03 - Maven and Gradle

Chapter 1 - Git and GitHub for Java Engineers - Planned Learning Roadmap	4
Part II - Practice and Handoff	6
Practice Ladder and Next Steps	6

Part I - Core Learning**SDE-2 CORE CHAPTER**

Chapter 1 - Git and GitHub for Java Engineers - Planned Learning Roadmap

Publication status: roadmap edition. This book establishes the learning order and scope now; executable labs, screenshots, failure drills, and interview exercises will be expanded in later revisions.

Git is the local version-control system. GitHub is a collaboration and delivery platform built around Git repositories. An SDE-2 candidate should be able to protect work, inspect history, collaborate through pull requests, and recover from routine mistakes without treating Git as a list of commands to memorize.

Planned sequence

- 1 Repositories, working tree, staging area, commits, and object identity.
- 2 Branches, **HEAD**, merge bases, fast-forward merges, and three-way merges.
- 3 Remote-tracking branches, fetch, pull, push, and upstream configuration.
- 4 Rebase, interactive rebase, cherry-pick, revert, reset, restore, and reflog.
- 5 Conflict resolution with explicit verification before committing.
- 6 GitHub pull requests, reviews, required checks, CODEOWNERS, and protected branches.
- 7 Issues, labels, milestones, releases, tags, and contribution workflows.
- 8 Secrets, signed commits, dependency alerts, and safe repository hygiene.

Interview and production focus

The completed edition will explain when history rewriting is safe, why **revert** is preferred on shared branches, how a merge base affects diffs, how to recover a lost commit through the reflog, and how branch protection turns review policy into an enforceable control. Labs will use a small Java repository and include both command-line and GitHub workflows.

Completion gate

A reader is ready to continue when they can create a feature branch, make focused commits, update it safely, resolve a conflict, open a pull request, explain the resulting history, and recover from an incorrect local operation without deleting unrelated work.

Part II - Practice and Handoff

Practice Ladder and Next Steps

TRY IT | Practice ladder

- Foundation: local repository workflow
- Interview Core: branches, merges, and pull requests
- SDE-2 Follow-up: recovery, releases, and review quality

For every coding problem, state the input contract, select the numeric and collection types deliberately, write the invariant before the loop or recursion, test the smallest and largest valid inputs, and close with time and auxiliary-space complexity.

Navigation

[Previous book: JAVA 01 - Java Foundations for Problem Solving](#)

[Series index](#)

[Next book: JAVA 03 - Maven and Gradle for Java Engineers](#)

TRY IT | Completion check

- ☐ I can recognize the core patterns without being told the data structure or algorithm.
- ☐ I can implement the representative Java templates from memory.
- ☐ I can explain why each implementation is correct.
- ☐ I can test boundaries, invalid inputs, overflow, and adversarial shapes.
- ☐ I can answer at least one SDE-2 follow-up involving trade-offs or production constraints.

Series Roadmap

Choose Java, DSA, or System Design and Backend first, then follow the books inside that segment in order. Stable study-step codes remain on filenames and links; the clearer segment book codes appear on the website and every PDF cover.

SEGMENT	BOOK	FOCUSED LEARNING PATH
Java	JAVA 01	Java Foundations for Problem Solving
Java	JAVA 02	Git and GitHub for Java Engineers
Java	JAVA 03	Maven and Gradle for Java Engineers
Java	JAVA 04	Advanced Java B: Language, OOP, and Modern Java
Java	JAVA 05	Advanced Java C: Collections, Streams, and I/O
Java	JAVA 06	Advanced Java A: JVM and Execution
Java	JAVA 07	Advanced Java D: Concurrency and the Memory Model
Java	JAVA 08	Advanced Java E: Performance, Diagnostics, and GC Incidents
Java	JAVA 09	Advanced Java G: Question Bank, Study Plan, and Reference
DSA	DSA 01	Time and Space Complexity for Java Interviews
DSA	DSA 02	Number Systems and Math Foundations for DSA Interviews
DSA	DSA 03	Number Systems Interview Patterns and Rapid Revision
DSA	DSA 04	Bit Manipulation in Java
DSA	DSA 05	Loop Mastery, Patterns, and Index Calculations
DSA	DSA 06	Arrays and Array Problem-Solving Patterns
DSA	DSA 07	Strings and String Problem-Solving Patterns
DSA	DSA 08	Hashing: Maps, Sets, Frequency, and Prefix State
DSA	DSA 09	Recursion and Backtracking in Java
DSA	DSA 10	Linked Lists: Pointer Reasoning and Mutation
DSA	DSA 11	Stacks, Queues, Deques, and Monotonic Patterns
DSA	DSA 12	Binary Search: Bounds, Answers, and Invariants
DSA	DSA 13	Trees, Binary Search Trees, and Tries
DSA	DSA 14	Heaps, Priority Queues, Selection, and Top-K
DSA	DSA 15	Graphs: Traversal, Ordering, Paths, and Union-Find
DSA	DSA 16	Greedy Algorithms: Recognition, Proofs, and Scheduling
DSA	DSA 17	Dynamic Programming: State, Transitions, and Optimization
System Design	SD 01	Advanced Java F: Design, Backend, Testing, and Security
System Design	SD 02	MySQL for Java Backend Interviews
System Design	SD 03	Hibernate and JPA for Java Backend Interviews
System Design	SD 04	Spring Framework for Java Engineers
System Design	SD 05	Spring Boot for Java Backend Engineers

SEGMENT	BOOK	FOCUSED LEARNING PATH
System Design	SD 06	Spring Data for Java Backend Engineers
System Design	SD 07	MongoDB for Java Backend Interviews
System Design	SD 08	Redis for Java Backend Interviews
System Design	SD 09	Apache Kafka and Spring Kafka
System Design	SD 10	Spring Ecosystem Extensions
System Design	SD 11	Spring AI for Java Engineers
System Design	SD 12	Advanced Java H: Spring Boot and REST APIs
System Design	SD 13	Advanced Java I: Persistence, SQL, JPA, and Caching
System Design	SD 14	Advanced Java J: Distributed Systems and System Design

Roadmap editions identify planned books whose chapter sets will be expanded one at a time. Existing deep-dive books remain available later in each segment, so no published material is displaced.

About the Author

Vinay Reddy Kalluri

Vinay Reddy Kalluri is a senior Java backend engineer, the creator and founding author of the Java SDE-2 Interview Preparation Series, and its Editor-in-Chief and Chief Auditor. His work spans high-throughput microservices, event-driven architecture, resilient APIs, large-scale data processing, cloud delivery, and production performance across healthcare and enterprise systems.

Editorial leadership

As Editor-in-Chief, Vinay owns the learning sequence, scope, voice, and publication decisions. As Chief Auditor, he owns the Java accuracy standard, validation evidence, attribution review, and release-readiness gate. Individual contributors retain visible credit for accepted original work through AUTHORS.md and the public Git history.

What distinguishes his approach is the combination of hands-on system design and operational ownership. He treats timeouts, retries, idempotency, dead-letter recovery, data consistency, SQL behavior, caching, and observability as part of the design rather than afterthoughts. He has also mentored engineers and led modernization, migration, and reliability work across distributed services.

Selected engineering and academic highlights

- More than eight years building Java and Spring Boot services for high-throughput healthcare and enterprise platforms.
- Designed Kafka-based event systems that have processed more than one million events per hour, with explicit idempotency, retry, recovery, and observability controls.
- M.S. in Computer Science from the University of Missouri-Kansas City (3.9/4.0) and M.S. in Software Engineering from VIT University (9.3/10), where he was a Gold Medalist.
- Independent builder of Work Visa Insights, an immigration-data intelligence platform, and Play Together, a published Android application.

Why this series exists

Vinay created this series to turn fragmented interview preparation into a deliberate progression: learn the fundamentals, run the examples, predict behavior, debug failures, explain trade-offs, and only then move into advanced engineering. The books reflect the same principle he applies to production systems: clarity before cleverness, explicit contracts, measurable behavior, and reliable foundations.
